No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                             1 ggctttggcatgatgggcac......tttgggccaaccacaggttg 3505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Sequence 3, Sequence 1, Sequence 2, Sequence 2, Sequence 4, Sequence 5, Sequen

Claim 50; Fig 51; 286pp; English.

The present invention describes an isolated antibody that binds to one of the human PRO proteins designated PRO312, PRO301, PRO531, PRO513, PRO619, PRO6105, PRO1005, PRO1009, PRO1005, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009, PRO1009,

   The invention relates to human PRO polypeptides and the polynucleotides encoding them. The sequences are useful in the preparation of a medicament for treating a condition responsive to a PRO polypeptide. The polypeptides are useful in a number of functional biological assays, as molecular weight markers for protein electrophoresis and as therapeutic
                  Novel isolated PRO polypeptides e.g. PRO1491 and PRO1571, useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide, and as therapeutic agents e.g. vaccines.

   The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 123 fully defined sequences as given in the specification (including their extracellular domains either given in the specification (including their extracellular domains either or thout their associated signal peptides. Also include are the nuclectide (NA) sequences encoding PRO, a vector comprising the PRO NA, a host cell comprising the vector, producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. Pro is useful as molecular weight markers for protein electrophoresis and also for chromosome identification. PRO is also useful for tissue typing. PRO and PRO NA are useful as hybridisation probes for a cDNA library to isolate the full-length PRO cDNA. PRO NA is useful for generating transgenic animals or knock-out animals which are useful in development and screening useful reagence. PRO NA is also useful in gene therapy. PRO1244, PRO1266 and PRO1303 polypeptides are useful for treating cancerous tumours. PRO1350, PRO1418 and PRO1410
  ÇĶ.
   New secreted and transmembrane PRO polypeptides useful for treating cancers, kidney disorders, Crohn's disease, diabetes mellitus, hyper- or hypo-insulinemia, sports injuries and arthritis.

ö
polypeptides are useful for suppressing immune response. PRO1246
polypeptide is useful for treating cardiac insufficiency disorders.
PRO1246 polypeptide is also useful for treating tumours. PRO1246 and
PRO1265 polypeptide are useful for stimulating calcium flux in human
umbilical vein endochbelial cells. PRO1265, PRO1250 and PRO1474
polypeptides are useful for treating bone and/or cartilage disorders
(e.g., arthritis) and wound healing. PRO1130, PRO1275 and PRO1418
polypeptides are useful for treating diabetes in skeletal muscle cells
and obesity. PRO1265, PRO1244 and PRO1382 polypeptides are useful for
treating Berger disease or other nephropathies associated with Schonlein-
Henoch purpura, coellac disease, dermatitis, herpetiformis or Crohn's
disease. PRO1475 are useful in treating thalassaemias. The present
sequence encodes a PRO protein of the invention.

  The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity
   Fong S;
Hillan KJ;
Watanabe C
   Novel isolated PRO polypeptide, useful for treating cancerous tumors, cardiac insufficiency disorders, wound healing, diabetes mellitus, thalassemias.

  S
   The invention relates to an isolated PRO polypeptide (secreted or
   Novel secreted and transmembrane PRO polypeptides useful in the preparation of a medicament for treating a condition responsive polypeptide and as therapeutic agents e.g. vaccines.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AK022349 1838 bp mRNA linear PRI 01-AUG-2002
Homo sapiens cDNA FLJ12287 fis, clone MAMMA1001771, moderately
similar to M.musculus mRNA for semaphorin B.
AK022349.1 GI:10433727
oligo capping; fis (full insert sequence).
Homo sapiens

NEDO human CDNA sequencing project
Unpublished
J. Chasses I to 1838)
S. Isogai,T. and Otsuki,T.
Direct Submission
Submisted (23-AUG-2000) Takao Isogai, Helix Research Institute,
Genomics Laboratory, 1532-3 Yana, Kisarazu, Chiba 292-0812, Japan
(E-mail:genomics@hri.co.jp, Tel:81-438-52-3975, Fax:81-438-52-3986)
NEDO human cDNA sequencing project supported by Ministry of
International Trade and Industry of Japan; CDNA full insert
sequencing: Research Association for Biotechnology; cDNA library
construction, S. & 3. end one pass sequencing and clone selection:
Helix Research Institute (supported by Japan Rey Technology Center
etc.) and Department of Virology, Institute of Medical Science,
University of Tokyo.

/clone lib-mico histor recumbly of the macia with a following lib-mico for the modified polylinker; Site 1: Not I; modified polylinker; Site 1: Sook I; Site 2: Not I; modified polylinker; Site 1: Ecox I; Site 2: Not I; NCI CGAP DTI is a normalized CDNA library containing the following tissue (s): Metatastic Chondrosarcoma in Lung. The library was constructed according to Bronaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an Ecox I adaptor, digested with Not I; and cloned directionally into pTTT3-ac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AACTGTTGGG.

/clone FHO is a cDNA library containing the following
tissue(8): Human Grade 1 Chondrosarcoma Cell Line The
library was constructed according to Bonaldo, Lennon and
Soares, Genome Research, 6:791-806, 1996. First strand
CDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an EcoR I adaptor, digested with Not I, and cloned
directionally into PT77-Pac vector. The oligomicleotide
used to prime the synthesis of first-strand cDNA contains
a library tag sequence that is located between the Not I
site and the (dT)18 tail. The sequence tag for this
library is AGAATCGGGC. The cell line was provided by Dr
James Martin from University of Lowa

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

WPI; 2003-182653/18. 

New cDNAs, which are differentially expressed in (metastatic) breast cancer useful for diagnosing or staging, breast cancer, or for monitoring the treatment of breast cancer in an individual.

Claim 1; SEQ ID NO 69; 30pp; English.

The invention describes a combination of CDNAs (designated BC-CDNAs), which are differentially expressed in breast cancer. The combination includes 152 CDNA sequences, or their complements. The protein encoded by any of these BC-CDNAs is useful for screening several molecules or compounds to identify at least one ligand that specifically binds the protein, producing or preparing polyclonal or monoclonal antibodies, or purifying antibodies from a sample. The antibodies, which specifically bind the protein differentially expressed in breast cancer is useful for detecting the expression of a protein in a sample. The BC-CDNAs are also useful for diagnosing, monitoring the treatment of, or staging, breast

methylation; cancer; colon cancer.

DNA

(first entry)

Karpf

```
New combination comprising cDNAs that are expressed in a disorder or process associated with DNA methylation, useful for diagnosing, staging, treating or monitoring treatment of cancer, e.g. colon cancer.
  Human putative tumour antigen cDNA Incyte 347492.1.

The invention relates to a combination comprising cDNAs which are expressed in a disorder or process associated with DNA methylation. The combination and cDNAs are useful for disgnossing, straging, treating or monitoring treatment of cancer, e.g. colon cancer and for detecting changes in expression of genes encoding proteins that are associated with DNA methylation. The protein is useful for screening molecules or compounds to identify at least one ligand that binds to the protein and for producing an antibody. The present sequence represents a cDNA expressed in a disorder or process associated with DNA methylation

ACD42209 standard; cDNA; 800

RESULT 2 ACD42209 ID ACD4

```
The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits in creased or decreased expression in lung cancer samples. Lung cancer-associated polymucleotides and polympetides are used for identifying a compound that modulates a lung cancer-associated polympetide, for inhibiting proliferation of a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by cancer in a patient and for treating a mammal having lung cancer in a patient and for treating a mammal having lung cancer, non-small cell for treating us cancer, such as small cell lung cancer, non-small cell lung cancer or other benign or precancerous lesions, e.g. stelectasis, emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polymucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences compounds that modulate lung cancer, such as antibodies. Sequences

   The invention relates to a method for detecting a lung cancer-associated transcript in a cell from a patient, comprising contacting a biological sample from the patient with a polymucleotide that selectively hybridises to a sequence that is at least 80 % identical to a gene that exhibits in increased or decreased expression in lung cancer samples. Lung cancer-associated polymucleotides and polypeptides are used for identifying a cancer that patient and for treating a mammel having lung cancer in a patient and for treating a mammel having lung cancer by cancer in a patient and for treating a mammel having lung cancer by cancer or other benign or precancerous lesions, e.g. atelectasis, lung cancer or other benign or precancerous lesions, e.g. atelectasis, compiseema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polymucleotides and polypeptides are useful compounds that modulate lung cancer, such as antibodies. Sequences compounds that modulate lung cancer, such as antibodies. Sequences
  Lung cancer-associated polynucleotide; gene, ds; cytostatic; emphysema, antiinflammatory; attiasthmatic; non-small cell lung cancer; atelectasis; small cell lung cancer, benign lesion; precancerous lesion; bronchitis; chronic obstructive pulmonary disease; hypersensitivity pneumonitis; interstitial pulmonary fibrosis; fibrosis; asthma; bronchiectasis.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed carivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating a useful for generating antibodies against it, detecting or quantitating supplement. (II) and its binding partners are useful in medical imaging of supplement. (II) and its binding partners are useful for treating disorders of sites expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics formatic dene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and and conting sequences. Asset197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this print of mutations in the printed specification, but was obtained in the view of sequences.

  The invention describes an isolated human enzyme peptide (I) that is related to the helicase family. (I), its allelic variant, orthologue or fragment is useful for identifying a modulator of a human enzyme peptide. The method optionally involves contacting a cell expressing the peptide with an agent and determining if the agent has modulated the expression of the peptide. (I) and the polynucleotide encoding it (III) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate enzyme activity in

cells and tissue that express the enzyme. The proteins can also be used in screening assays to screen a compound for its ability to stimulate or inhibit interaction between enzyme protein and a molecule that normally interacts with the enzyme protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the companied in pharmacogenomic analysis. The peptides are also useful for treating a disorder characterised by altered expression of the protein e.g. carcinoma. Anti-(I) antibodies are also useful for assessing comman and aberrant subcellular localisation of cells in various tissues in an organism, in pharmacogenomic analysis, for tissue typing and for inhibiting protein function. The nucleic acid molecules are useful for constructing recombinant vectors, host cells and transgenic animals, and for designing recombinant vectors, host cells and transgenic animals, and for designing recombinant vectors. Host cells and transgenic animals, and for designing recombinant vectors host cells and transgenic animals, and for designing recombinant vectors host cells and transgenic animals, and for leaful in diagnostic assays for qualitative changes in expression of useful in diagnostic assays for qualitative changes in expression of useful in diagnostic assays for qualitative changes in expression of disease or susceptibility to disease which results from altered the associated with a dysfunction of mutated form of gene encoding enzyme therapy in patients with aberrant expression of gene encoding enzyme therapy in patients with aberrant expression of gene encoding enzyme. This sequence encodes the novel human protein deleted in cancer I (DICEI) with protein, a candidate tumour suppressor gene

  The present sequence encodes human sqbh3.10 (SAGE), a sarcoma-associated gene product (I). Agents, specifically sarcoma associated nucleic acids (II) or thair expression products that are tumour rejection antigens artigens (TRA), that selectively increase formation of HLA (human leucocyte antigen)/(I) complexes are used for treating cancer, especially sarcoma carcinoma, in humans and other animals. Compositions contraining autologous cytolytic T cells (CTL), specific for the HLA/(I) complex, are similarly useful, also transformed cells that stimulate such CTL in vivo. (II) are also used: (I) as source of therapeutic antisense sequences that reduce expression of (II); (ii) for recombinant production of (I); (iii) particularly its fragments, as primers and probes in usual hybridisation can amplification assays, for diagnosis, prognosis and monitoring of tumours, or for measuring binding specificity of HLA molecules or CTL clones; (IV) to identify related sequences; and (V) for generating transgenic animals, e.g. for studying cancer and immune responses to it. (I) are used to raise specific antibodies (AAb) and therapeutically. Ab are used to diagnose tumours in immunoassays, also for delivering drugs, toxins, imaging agents etc. to (I)-expressing cells

AB017575 to AB020506 represent isolated polynucleotide (I) sequences, and ABP5446 to ABP54472 represent protein (II) sequences, from the present invention. (I) and (II) have cytostatic activity and can be used in gene therapy and vaccines. (I), (II), antibodies and compositions from the present invention are useful for diagnosing, preventing and treating cancer, which expresses CT or CP mRNA antigens. They are useful for stimulating immune response. They can also be useful in virology, imcrobiology, molecular biology and recombinant DNA techniques. N.B. The sequence data for this patent did not form part of
  New immunogenic polynucleotides or polypeptides useful for diagnosing, preventing and treating cancer expressing CT or CP mRNA antigens, and in virology, immunology, microbiology, molecular biology and recombinant DNA

  This invention relates to the DNA and protein sequences of a novel polypeptide-human tumour suppressor protein DICEL-98-61.27. The invention also comprises a method for producing the protein by recombinant DNA technology and the application of the polypeptide in treating several diseases such as diabetes and tumours. Also disclosed is an antagonist against the polypeptide, methods for its therapeutic action, and the application of the polymucleotide to coding this new human tumour suppressor protein DICEL-98-61.27. The present sequence represents the cDNA encoding the human tumour suppressor protein DICEL-98-61.27 of the

   The invention relates to human cysteine protease 10.89 (ABP58982) and nucleic acids encoding it (ABZ70855). The protein has a molecular weight of 10.89 kD. The invention also relates to a method for the recombinant production of the protein, an antagonist of the protein, and the use of the protein, gene and antagonist in therapeutic applications. Cysteine protease 10.89 can be used in the treatment of a variety of diseases such as neuropathy, tumours, developmental disorders (particularly embryonic development disorders), immune disorders and inflammatory conditions. The present sequence represents cDNA encoding human cysteine protease 10.89

  The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene postitions, and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present DNA sequence represents a gene of the
   New polymucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Economy, Trade and Industry of Japan; CDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA ilbrary
construction and 5'-end one pass sequencing: Institute of Medical
Science, University of Tokyo, Laboratory of Genome Structure, Human
Genome Center; 3'-end one pass sequencing: RAB; clone selection for
full insert sequencing: RAB and Helix Research Institute.

contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved. contig of 890 bp in length gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap of 100 bp gap 100 bp of 912 bp in length 100 bp 100 bp in length 100 bp of 905 bp in length 100 bp of 878 bp in length 100 bp of 879 bp in length 100 bp on length 100 bp 9 of 905 bp in length 100 bp 9 of 899 bp in length 9 of 889 bp in length 100 bp of 899 bp in length 100 bp of 877 bp in length 100 bp of 888 bp in length in length 100 bp of 905 bp in length 944 bp in length 100 bp of 906 bp contig gap of 1 contig contig gap of contig gap of 1 contig gap of contig gap of gap of gap of gap of contig gap of contig gap of contig contig contig contig contig contig contig contig contig gap of contig gap of contig

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

num 20, 2003 this sequence version replaced gi:18121499.

During sequence assembly data is comparated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

corresponding to the overlapping clone, as we submit sequences with

corresponding to the overlapping clone, as we submit sequences with

corresponding to the overlapping clone, as we submit sequences with

corresponding to the overlapping clone, as we submit sequences with

the following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:

Em: FMBL; Sw: SWISSRROT; Tr:, TREMBL; Wp:, WORNPEP; Information

on the WORNPEP database can be found at

http://www.aanger.ac.uk/POCtcs/C_elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome X, constructed by the Sanger Centre Chromosome X Mapping

Group. Purther information can be found at

http://www.anger.ac.uk/HGPP/ChX

RP13-36C9 is from the library RPCI-13.1 constructed by the group of

Pieter de Jong. For further details see

http://www.chord.co.org/Dacpac/home.htm
  51218 Adadahahddahttacarttactritictacahtgahgdahartactaahdtctcctd 51277
  This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality date d (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
numquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Jun 20, 2003 this sequence version replaced gi:18121499.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Mp., WORMPEP; Information
on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
dromp. Further information can be found at
http://www.aanger.ac.uk/HGP/ChrX
RP13-360 is from the library RPCI-13.1 constructed by the group of

  Gaps
  NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

  ò
   regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30), an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, database can be found at
  During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
  http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX RR11-97NS is from the library RPCI-11.1 constructed by the group of http://www.chori.org/bacpac/home.htm
